

## Tasks (Based on session 1 and session 2)

### Task 1

Make changes whatever you want in the main branch in your local git workspace and make commits and push **five times** to your respective git repo.

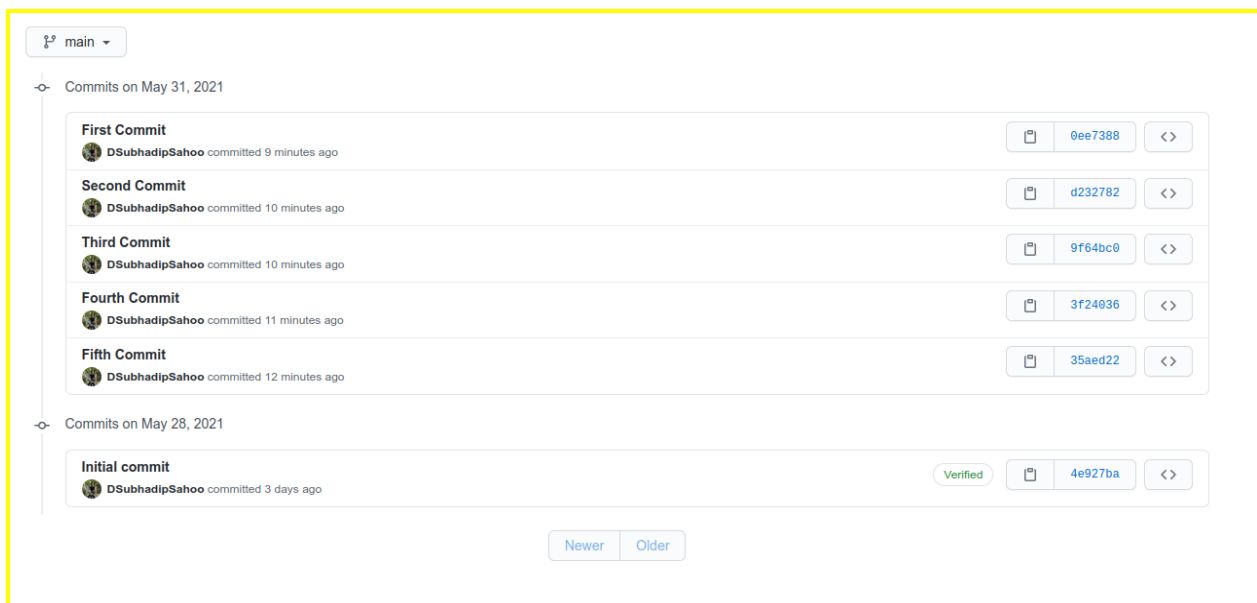

But

Your commit history should look like below

1. In your local machine if you run the **git log --oneline** command, the output should be like this. Every commit has a unique commit id (according to the screenshot on the left side of each commit message) which will be different for each one of you. So you don't have to worry about those commit ids.

```
subha@developer:/var/www/html/intership-git-training$ git log --oneline
0ee7388 (HEAD -> main) First Commit
d232782 Second Commit
9f64bc0 Third Commit
3f24036 Fourth Commit
35aed22 Fifth Commit
4e927ba Initial commit
```

2. In your github repo if you check commit history of main branch then it will look like below screenshot

## **Task 2**

You have to push all the commits to repo using the below git command. You have to record a video while you are pushing to your respective repo with the below command and submit that to me.

**git push tier5 main**

### **Important Information**

Last date of submission: **6th June, 2021**

Reporting Person: **Subhadip Sahoo**

Process to submit tasks: You can directly submit to me over teamwork. Do not submit your task in **Tier5 Inty Minty Interns-IPSESS0150521** channel

OR

You can send me an email (subhadip.sahoo@tier5.in) keeping Chris in CC

Please Note: You can ask me anytime if you have any query regarding these two tasks.

ALL THE VERY BEST TO YOU ALL
